

# Everything You Always Wanted to Know About Statistics, but Didn't Know How to Ask

This book is unique in its question and answer approach to the subject. It has been designed as a much-needed addition to the textual materials utilized in the introductory courses in statistical methodology. Prof. Brewer has organized his material in progressive steps to parallel topics presented in most introductory courses, responding in common sense fashion to questions typically asked by students. The many exercises, tests, diagrams, tables, and charts help the student to further interpret the data. This book may be used as a basic stats text, a refresher for the once-initiated, or as a supplement to other texts.
