

# An Attempt to Establish a Pure Scientific System of Mineralogy: By the Application of the Electro-Chemical Theory and the Chemical Proportions (Classic Reprint)

Excerpt from An Attempt to Establish a Pure Scientific System of Mineralogy: By the Application of the Electro-Chemical Theory and the Chemical Proportions

The indefatigable industry, the uncommon precision, and the great number of new and important views with which the author of this little work has enriched Chemistry and the kindred Sciences, are sufficiently known, I presume, to all men of science in Great Britain, to induce them to receive every new proposal which comes from him with candour and attention. Professor Berzelius was obliging enough to send me a copy of the Original of this little Essay, immediately on its publication at Stockholm, about three months ago. On looking it over, it appeared to me highly deserving the attention of mineralogists, and likely, if properly followed up, to occasion a most important improvement in the method of analyzing minerals and in the scientific arrangement of them. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
