

Marine mammals and seabirds in front of offshore wind energy: MINOS - Marine warm-blooded animals in North and Baltic Seas

Das MINOS-Projekt untersucht, ob große Windkraftanlagen in der deutschen Nord- und Ostsee Schweinswale, Seehunde oder Meeresvögel beeinträchtigen oder gefährden. Das Buch soll die Ergebnisse darstellen und dabei einzelne Fragestellungen in Kapiteln und nicht nach den Teilprojekten betrachten. Die Vorstellung von Methoden und deren Diskussion soll nur insoweit erfolgen, wie sie für das Verständnis der Ergebnisse notwendig ist bzw. in den Projekten, in denen ein großer Schwerpunkt auf der Methodenentwicklung / deren Vergleich liegt. Die Themen werden in einer Kapittelfolge angeordnet, die von der groß- zur kleinskaligen Betrachtung reicht, sowohl in räumlicher als auch zeitlicher Dimension. Am Ende stehen die Ergebnisse zu den Auswirkungen am einzelnen Tier.
