

The Journal of Biological Chemistry, 1918, Vol. 33 (Classic Reprint)

Excerpt from The Journal of Biological Chemistry, 1918, Vol. 33

The finding of occult blood in stools is of great importance in the diagnosis of ulcer and cancer of the stomach. However, the usual chemical methods are so unreliable in their results that they are at present discredited by many surgeons and internists. A review of the literature of this subject shows not only that the number of reagents proposed is very large, but that there also exists a considerable number of procedures for the use of these reagents. The two most widely used are gum guaiac and benzidine. The phenolphthalein reagent is difficult to prepare and moreover is entirely too sensitive for ordinary use. In a previous paper we have shown how the benzidine reagent may give erroneous results unless great care is exercised in cleaning all the apparatus as well as in the use of reagents of definite concentrations. In the routine examination of stools we have found it difficult to get good controls with benzidine; moreover, it is too sensitive. An alcoholic solution of gum guaiac possesses the following disadvantages: (1) Not being of fixed composition or purity, a solution of definite concentration cannot be readily prepared. (2) Gums from different sources vary greatly in their sensitiveness as well as in the stability of the blue compound formed. (3) For the best results, solutions must be freshly prepared.

About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com

This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of

imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
