

Turkish Studies in the History and Philosophy of Science (Boston Studies in the Philosophy and History of Science)

As an academic discipline, the philosophy and history of science in Turkey was marked by two historical events: Hans Reichenbachs immigrating to Turkey and taking a post between 1933 and 1938 at Istanbul University prior to his tenure at UCLA, and Aydin Sayilis establishing a chair in the history of science in 1952 after having become the first student to receive a Ph.D. under George Sarton at Harvard University. Since then, both disciplines have flourished in Turkey. The present book, which contains seventeen newly commissioned articles, aims to give a rich overview of the current state of research by Turkish philosophers and historians of science. Topics covered address issues in methodology, causation, and reduction, and include philosophy of logic and physics, philosophy of psychology and language, and Ottoman science studies. The book also contains an unpublished interview with Maria Reichenbach, Hans Reichenbachs wife, which sheds new light on Reichenbachs academic and personal life in Istanbul and at UCLA.
